

The chart displays the price of Bitcoin from January 2019 to August 2019. The blue line represents the daily closing price (Open.S). The markers indicate long and short positions: green triangles for Open Long, red triangles for Open Short, green crosses for Close Long, and red crosses for Close Short. The price starts around \$12,000 in January, dips to a low of about \$10,000 in late January, then rises to a peak of nearly \$15,000 in late February. It then fluctuates between \$12,000 and \$14,000 until May, where it drops to around \$10,000. From May, it rises sharply to over \$15,000 by late June, and continues to climb with some volatility, reaching a peak of nearly \$20,000 in late July before a sharp drop and recovery.
