Deep learning trading signals

July 2019

Who we are...

- **Stéphane Benichou :**

PhD in Finance – Sorbonne university. 20 years experience in trading. Hedge fund manager in futures, stocks, options, Fx. Focused in algo trading development since 5 years.

- **Jérôme Soussand :**

PhD in neuroscience. He has been working at INSERM and CNRS. Patent author. Data scientist specialized in neural networks, AI, Algorithms, deep learning, data science, data visualization, data analyst.

- **Billy Buzeau :**

Company Development Expert. 16 years of experience. Has created, developed and directed companies (up to 70 million revenue) in electronics, electro-domestic products, 3d-oriented medical printing. Has resold some companies successfully to large groups (as Auchan).

What we do...

- Over 6 month of research to build an AI algo which delivers trading signals in all tradable markets.
- Our model analyses different data sources and produces exact trading signals for several assets each day.
- The model delivers long and shorts signals.
- Our signals have an horizon for several days.
- We combine our accurate signals with a portfolio diversification strategy to provide good results.

Performance

- We performed Backtests in 50 stocks of the S&P500 universe in daily time frame
- Max 100% of capital is used (no leverage)
- Backtest period : 2017 to 2019
- We traded long and shorts signals
- We started with a virtual portfolio of 400 000\$
- Each trade size is around 2.5% of the portfolio value divided by the Beta of the company.

2017 results

- Starting capital : 400 000\$
- Pnl for the portfolio : 163 900\$ (+41.2%)
- Max drawdown : -0.42%
- Number of long trades : 694
- Number of short trades : 673
- % of winners : 76%
- Average profit factor : 23.6
- Average trade lenght : 6 days

Net Assets Value - year 2017

2018 results

- Starting capital : 400 000\$
- Pnl for the portfolio : 366 000\$ (+91.5%)
- Max drawdown : -0.3%
- Number of long trades : 817
- Number of short trades : 799
- % of winners : 79.3%
- Average profit factor : 16.5
- Average trade lenght : 4 days

Net Assets Value - year 2018

2019 results

- Starting capital : 400 000\$
- Pnl for the portfolio : 278 000\$ (+70%)
- Max drawdown : -0.2%
- Number of long trades : 573
- Number of short trades : 561
- % of winners : 76%
- Average profit factor : 15.2
- Average trade lenght : 5 days

Net Assets Value - year 2019
